Introduction

Advances in technology have enabled replication of the 'out of the window' (OOW) view from traditional aerodrome air traffic service (ATS) facilities on visual presentation systems at a site remote from the original facility. It is therefore necessary for the Civil Aviation Authority (CAA) to develop policy and supporting guidance to address the implementation and operation of such remote aerodrome ATS facilities in all of their forms. This is the first phase of policy and guidance development, which will be progressively developed as the technology, procedures and regulatory requirements associated with such facilities evolve.
