

Airspace change masterplan – future opportunities to express views

CAP 2156c

Airspace modernisation and the airspace change masterplan

The **airspace change masterplan** is a single coordinated implementation plan of interdependent airspace change proposals modernising airspace out to 2040. **The masterplan does not include the detail of individual airspace designs.**

ACOG (Airspace Change Organising Group) was set up as an impartial body to coordinate the programme of airspace change and develop the masterplan. ACOG will develop the masterplan over four or more iterations. Iteration 1, a high-level description, has already been [published](#).

Purpose of this document

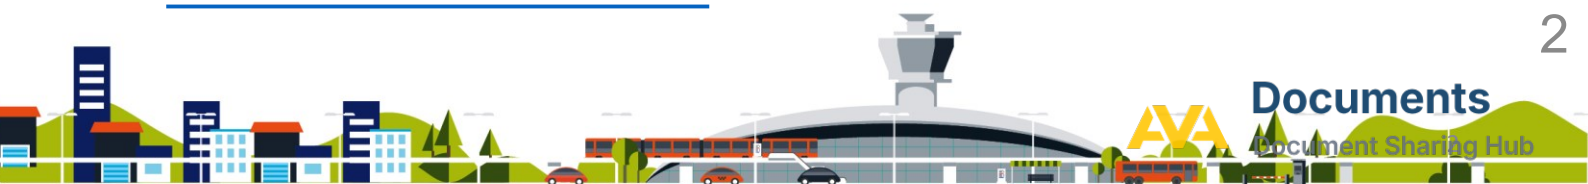

This document explains the opportunities that stakeholders have to provide input to:

- ACOG about the masterplan
- sponsors about their individual airspace change proposals that make up the masterplan.

For more information please see:

[CAP 2156a Airspace Change Masterplan – acceptance criteria](#)

[CAP 2156b Airspace Change Masterplan – assessment framework](#)

ACOG stakeholder engagement

‘Engagement’ is the catch-all term we use to mean developing relationships with stakeholders.

At Iteration 2, expected by the end of 2021, ACOG will develop a **stakeholder engagement strategy** showing its programme for engaging with relevant stakeholders as masterplan iterations are developed. ACOG will explain how stakeholders can best provide input about the masterplan that ACOG can take into account at the appropriate point. The strategy will also set out how sponsors of airspace change proposals are working together on consultation and engagement.

Stakeholder engagement is already key to the CAP 1616 process that all the airspace change proposals that make up the masterplan will follow. For more information please see [CAP 1616d](#) *How decisions about the UK’s airspace are made*, or [CAP 1616](#) itself.
